

Directions: Create an **Acrostic** for the concept listed below. Each letter should start a phrase that has to do with that concept. Each phrase should be a different idea. For example, in MITOSIS, you could write “Identical starting and ending cells,” but you could NOT also write “Same cells” because both are expressing the same idea. You will have TO THINK and BE CREATIVE!!! If you finish early, add some illustrations and color your Acrostic. Use the given starting cell, draw the daughter cells after mitosis.
